

## PRESS RELEASE

Colombes, France, July 22, 2020

### **ALPI & alfanar announce a strategic partnership centered on the flagship electrical design software Caneco BT**

ALPI Group, developer of the Caneco BT low voltage calculation software, and alfanar, one of Saudi Arabia's leading electrical engineering manufacturers, are pleased to announce their partnership. Working closely together, an OEM\* variant of Caneco BT has been developed, with which alfanar will serve their electrical planning markets.

The new software was called "alfaline based on Caneco BT". This version of Europe's leading calculation solution includes the alfanar parts catalogues relevant for network calculation, as well as the IEC 60-364 standard. Furthermore, it includes the functionalities of Caneco BT for the automated planning, calculation, documentation and dimensioning of low voltage electrical installations.

"Alfaline based on Caneco BT" was delivered in the second quarter of 2020 by alfanar to its customers such as electrical contractors, consultant engineers and panel builders.

ALPI and alfanar wish "alfaline based on Caneco BT" will continue the success of Caneco BT in the Middle East markets!

#### **About ALPI**

Created in 1986, ALPI company (Applications Logiciels Pour l'Ingénierie), is a European leader in automated calculation software for low voltage electrical installations for industrial and tertiary markets. The company employs more than 100 people in 4 countries. Backed by more than 30 years of experience in low voltage & high voltage distribution systems, ALPI's unique expertise lies in its comprehensive knowledge of the standards applicable to electrical installations. ALPI also enjoys privileged relationships with the key players in the market. ALPI supports its customers with additional services which include training courses, technical support and electrical engineering services. To meet the major BIM (Building Information Modelling) challenges, ALPI also proposes solutions to design and operate electrical installations using digital models.
